

*Dear parents/guardians,*

*You child will be attending a multicultural assembly in the next few weeks. As part of a research study with UTSA, UT Health Science Center and Musical Bridges Around the World, we encourage students to extend their learning with their families at home.*

*Something that your child might have found surprising is how well sound can travel through string, as long as the string is taut. You can support your child's curiosity by inviting them to consider whether sound can travel through any material. For example, here's a fun, easy experiment you can do at home: Will sound travel through the wall? Have your student try holding a cup to their ear, just like with a paper cup telephone, but with the bottom of the cup pressed against a wall. Then go to the other side of the wall and talk. See if it works!*

*Check out the Travel to India video the students watched. Enjoy!*
